

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

XLVII. *Extract from a Paper of Mons. De la Lande, of the Royal Academy of Sciences at Paris, to Mr. Gael Morris, of the Transit of Venus, on the 6th June 1761, observed at Tobolsk in Siberia, by M. Chappe.*

Read Feb. 25, 1762. at - - - - -	END of the eclipse of the sun, 2d June 1761,	Apparent time.		
		h	'	"
		18	11	4
Internal contact of Venus with the sun's limb at ingress, 5th June - - -		19	0	28
Internal contact at the egress, 6th June		0	49	20 $\frac{1}{2}$
External contact at the egress - - -		1	7	39 $\frac{1}{2}$

These observations were taken with a refracting telescope of 19 Paris feet focal length, with an eyeglass of 3 inches focus.

The least distance of the southern limb of Venus from the nearest limb of the sun, was measured by a micrometer fitted to a 10 feet telescope, and found to be = 6' 2'', and the sun's diameter was = 31' 37''.
